

## Subregional overview

### Malnutrition burden

In the Central America subregion, there has been some progress towards achieving global nutrition targets. The global target for under-five wasting has four countries on course to meet it. The targets for under-five overweight, under-five stunting, and infant exclusive breastfeeding each have three countries on course. However, not a single country in the subregion is on course to meet the targets for anaemia in women of reproductive age, low birth weight, male diabetes, female diabetes, male obesity, and female obesity. Four countries in the subregion have insufficient data to comprehensively assess their progress towards these global targets.

Although it performs relatively well against other subregions, Central America still experiences a malnutrition burden among its under-five population. The average prevalence of overweight in under-fives is 6.9% - the lowest compared to other subregions in Latin America and the Caribbean. The prevalence of stunting in under-fives is 12.9%, this is less than the global average of 21.9%. The Central America subregion's prevalence of wasting in under-fives of 0.9% is also less than the global average of 7.3%.

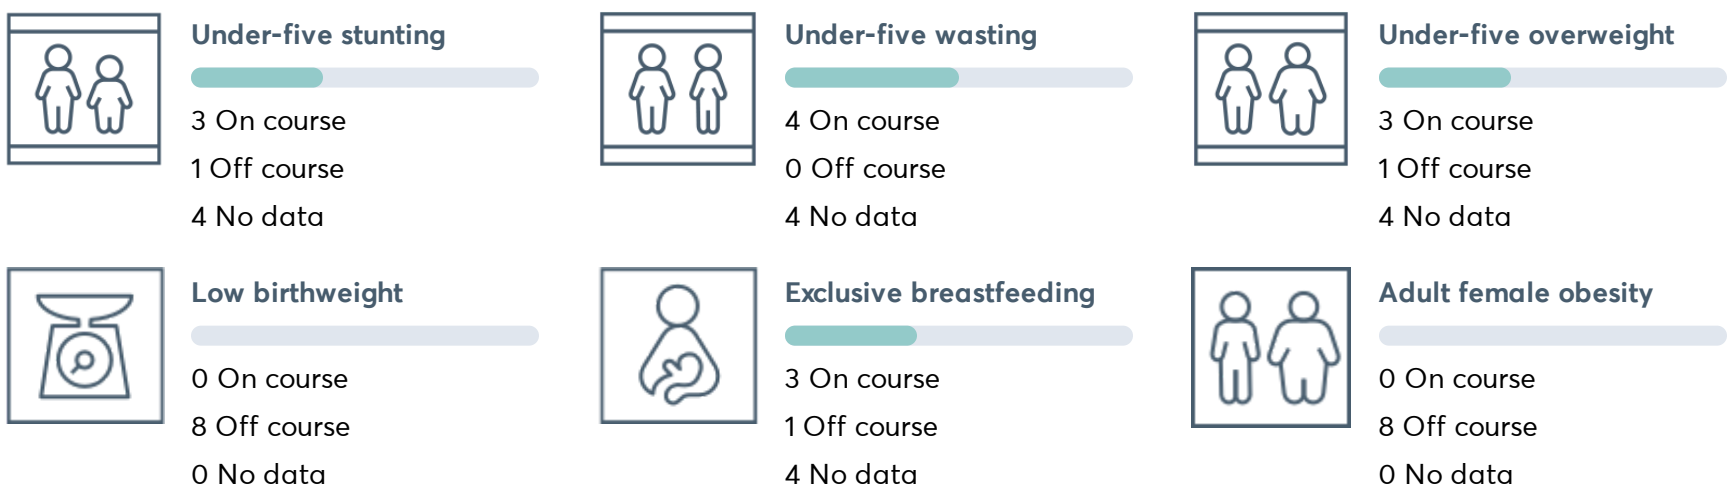

Some 33.9% of infants under 23 months in the Central America subregion are exclusively breastfed, while the subregion's average low birth weight prevalence of 8.7% is less than the global average of 14.6%.

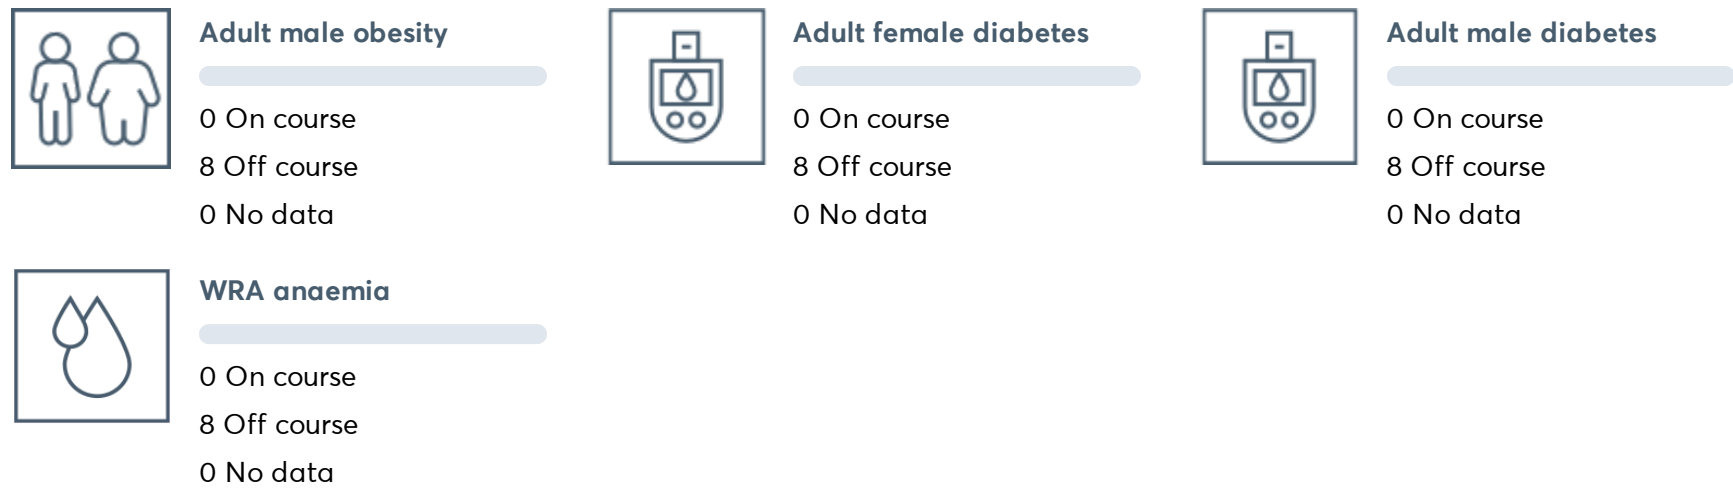

The Central America subregion's adult population also face a malnutrition burden. An average of 15.5% of women of reproductive age have anaemia, and 11.2% of adult women have diabetes, compared to 10.3% of men. Meanwhile, 31.4% of women and 22.2% of men have obesity.

# Resources, policies and targets

## Development assistance

Sources: Development Initiatives based on OECD Development Assistance Committee (DAC) Creditor Reporting System (CRS).

Notes: ODA = official development assistance. Amounts based on gross ODA disbursements, constant 2017 prices. Figure includes ODA grants and loans, but excludes other official flows and private grants.

## National policies

|  |     |
|--|-----|
| Mandatory legislation for salt iodisation  | 8/8 |
| Sugar-sweetened beverage tax   | 1/8 |
| Food-based dietary guidelines  | 7/8 |
| Policy to reduce salt consumption  | 2/8 |
| Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs   | 6/8 |
| Operational, multisectoral national NCD policy, strategy or action plan  | 5/8 |
| Operational policy, strategy or action plan for diabetes   | 6/8 |
| Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt | 1/8 |
| Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats   | 1/8 |

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: Value refers to the number of countries with policy. NA = not applicable; NCD = non-communicable disease.

Targets included in national (nutrition or other) plan

|  |                                   |
|--|-----------------------------------|
| Stunting                                   | Anaemia                           |
| 7/8  | 4/8                               |
| Low birth weight                           | Child overweight                  |
| 6/8  | 6/8                               |
| Exclusive breastfeeding                    | Wasting                           |
| 8/8  | 7/8                               |
| Salt intake                                | Overweight adults and adolescents |
| 5/8  | 6/8                               |
| Multisectoral comprehensive nutrition plan |                                   |
| 5/8  |                                   |
