

Country overview

Malnutrition burden

Lebanon is off course to meet the global targets for anaemia in women of reproductive age, low birth weight, male diabetes, female diabetes, male obesity, and female obesity. There is insufficient target data to assess Lebanon's progress for under-five overweight, under-five stunting, under-five wasting, and infant exclusive breastfeeding.

Although it performs relatively well against other developing countries, Lebanon still experiences a malnutrition burden among its under-five population. As of 2004, the national prevalence of under-five overweight is 16.7%. The national prevalence of under-five stunting is 16.5%, which is less than the developing country average of 25%. Lebanon's under-five wasting prevalence of 6.6% is also less than the developing country average of 8.9%.

There is insufficient data on exclusive breastfeeding among infants. Lebanon's 2015 low birth weight prevalence of 9.2% has decreased slightly from 9.3% in 2014.

Lebanon's adult population also face a malnutrition burden. 31.2% of women of reproductive age have anaemia, and 14.5% of adult men have diabetes, compared to 12.2% of women. Meanwhile, 37% of women and 27.4% of men have obesity.

National policies

| | |
|--|-----|
| Mandatory legislation for salt iodisation | Yes |
| Sugar-sweetened beverage tax | No |
| Food-based dietary guidelines | Yes |
| Policy to reduce salt consumption | No |
| Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs | Yes |
| Operational, multisectoral national NCD policy, strategy or action plan | No |
| Operational policy, strategy or action plan for diabetes | Yes |
| Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt | No |
| Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats | No |
