

Country overview

Malnutrition burden

Guyana is on course to meet the global targets for under-five overweight and under-five stunting, but is off course to meet the targets for all other indicators analysed with adequate data.

Although it performs well against other developing countries, Guyana still experiences a malnutrition burden among its under-five population. As of 2014, the national prevalence of under-five overweight is 5.3%, which has decreased slightly from 6.7% in 2009. The national prevalence of under-five stunting is 11.3%, which is less than the developing country average of 25%. Guyana’s under-five wasting prevalence of 6.4% is also less than the developing country average of 8.9%.

In Guyana, 21.1% of infants under 6 months are exclusively breastfed, this is well below the South America average of 57.3%. Guyana’s 2015 low birth weight prevalence of 15.6% has decreased slightly from 16.3% in 2000.

Guyana’s adult population also face a malnutrition burden. 32.3% of women of reproductive age have anaemia, and 12.6% of adult women have diabetes, compared to 9.1% of men. Meanwhile, 27.1% of women and 12.7% of men have obesity.

National policies

Mandatory legislation for salt iodisation	No
Sugar-sweetened beverage tax	No
Food-based dietary guidelines	Yes
Policy to reduce salt consumption	No
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	Yes
Operational, multisectoral national NCD policy, strategy or action plan	Yes
Operational policy, strategy or action plan for diabetes	Yes
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	No
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	No
