

Subregional overview

Malnutrition burden

In the Polynesia subregion, there has been some progress towards achieving global nutrition targets. The global target for infant exclusive breastfeeding has one country on course to meet it. However, not a single country in the subregion is on course to meet the targets for under-five overweight, under-five stunting, under-five wasting, anaemia in women of reproductive age, low birth weight, male diabetes, female diabetes, male obesity, and female obesity. Three countries in the subregion have insufficient data to comprehensively assess their progress towards these global targets.

Although it performs well against other subregions, Polynesia still experiences a malnutrition burden among its under-five population. The average prevalence of overweight in under-fives is 5.3% - the highest compared to other subregions in Oceania. The prevalence of stunting in under-fives is 4.9%, this is significantly less than the global average of 21.9%. The Polynesia subregion's prevalence of wasting in under-fives of 3.9% is also less than the global average of 7.3%.

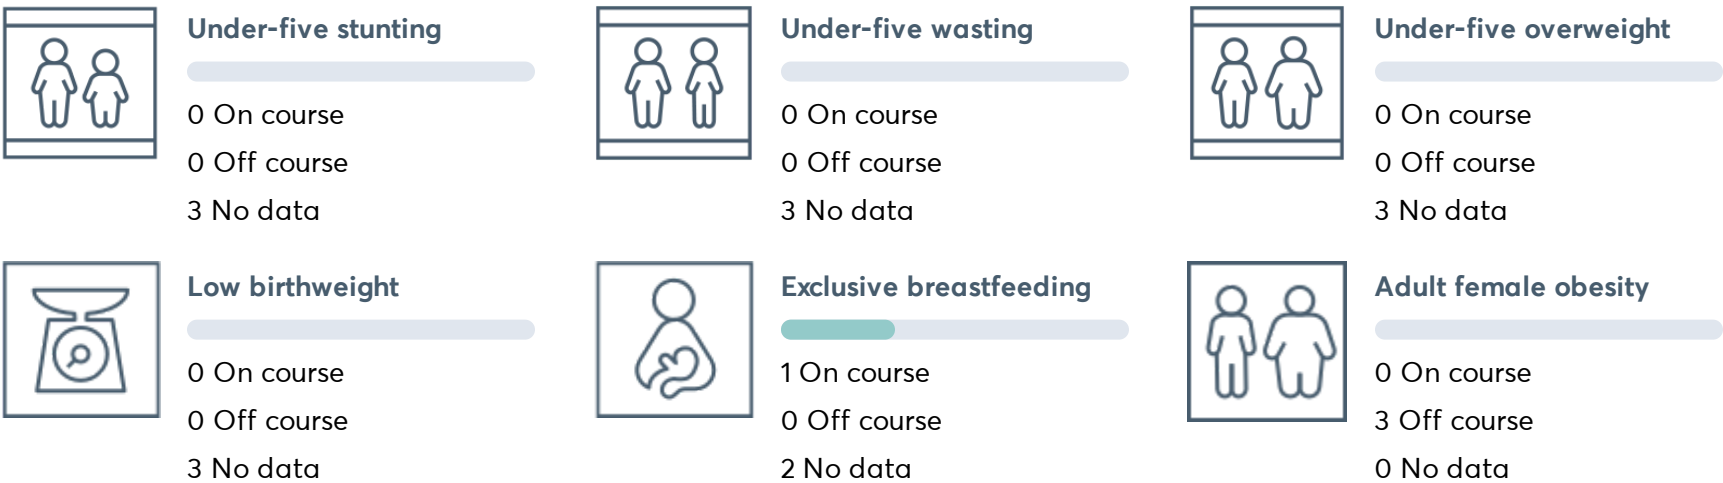

Some 70.3% of infants under 6 months in the Polynesia subregion are exclusively breastfed, while there is insufficient data on low birth weight.

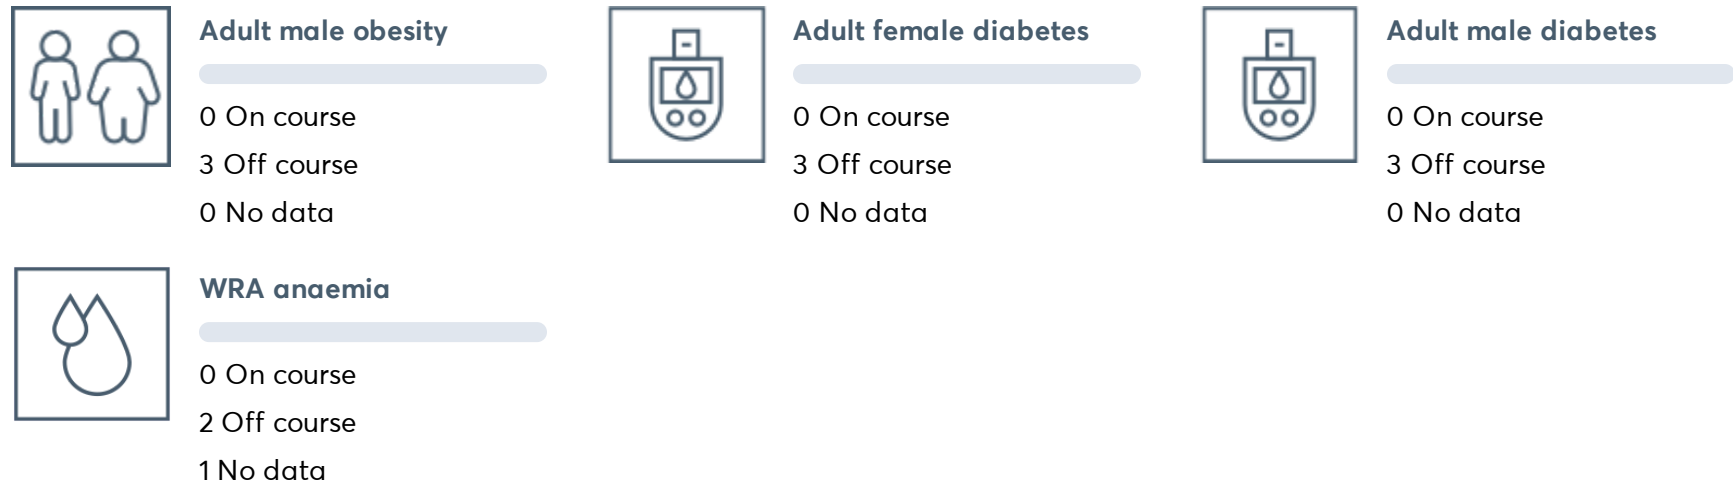

The Polynesia subregion's adult population also face a malnutrition burden. An average of 27.9% of women of reproductive age have anaemia, and 26.4% of adult women have diabetes, compared to 22.4% of men. Meanwhile, 54.9% of women and 40.7% of men have obesity.

National policies

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Mandatory legislation for salt iodisation | 0/5 |
| Sugar-sweetened beverage tax | 3/5 |
| Food-based dietary guidelines | 0/5 |
| Policy to reduce salt consumption | 0/5 |
| Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs | 3/5 |
| Operational, multisectoral national NCD policy, strategy or action plan | 2/5 |
| Operational policy, strategy or action plan for diabetes | 2/5 |
| Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt | 0/5 |
| Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats | 0/5 |

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: Value refers to the number of countries with policy. NA = not applicable; NCD = non-communicable disease.

Targets included in national (nutrition or other) plan

| | |
|--------------------------------------------|-----------------------------------|
| Stunting | Anaemia |
| 1/5 | 2/5 |
| Low birth weight | Child overweight |
| 1/5 | 3/5 |
| Exclusive breastfeeding | Wasting |
| 3/5 | 1/5 |
| Salt intake | Overweight adults and adolescents |
| 3/5 | 5/5 |
| Multisectoral comprehensive nutrition plan | |
| 1/5 | |

Sources: WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review.

Notes: Value refers to the number of countries with target.
