

Country overview

Malnutrition burden

Kiribati is off course to meet the global targets for anaemia in women of reproductive age, male diabetes, female diabetes, male obesity, and female obesity. There is insufficient target data to assess Kiribati's progress for under-five overweight, under-five stunting, under-five wasting, infant exclusive breastfeeding, and low birth weight.

Kiribati has no prevalence data available for under-five overweight, stunting, or wasting.

In Kiribati, 69% of infants under 6 months are exclusively breastfed. There is insufficient data on low birth weight.

Kiribati's adult population face a malnutrition burden. 26.1% of women of reproductive age have anaemia, and 22.6% of adult women have diabetes, compared to 22% of men. Meanwhile, 50.4% of women and 41.6% of men have obesity.

Resources, policies and targets

Development assistance

Sources: Development Initiatives based on OECD Development Assistance Committee (DAC) Creditor Reporting System (CRS).

Notes: ODA = official development assistance. Amounts based on gross ODA disbursements, constant 2017 prices. Figure includes ODA grants and loans, but excludes other official flows and private grants.

National policies

Mandatory legislation for salt iodisation	Yes
Sugar-sweetened beverage tax	Yes
Food-based dietary guidelines	No data
Policy to reduce salt consumption	No
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	No
Operational, multisectoral national NCD policy, strategy or action plan	No
Operational policy, strategy or action plan for diabetes	No
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	No
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	No
