

# Democratic People's Republic of Korea

## Country overview

### Malnutrition burden

The Democratic People's Republic of Korea is on course to meet the global targets for under-five stunting, under-five wasting, infant exclusive breastfeeding, and female diabetes, but is off course to meet the targets for under-five overweight, anaemia in women of reproductive age, male diabetes, male obesity, and female obesity. There is insufficient target data to assess the Democratic People's Republic of Korea's progress for low birth weight.

Although it performs well against other developing countries, the Democratic People's Republic of Korea still experiences a malnutrition burden among its under-five population. As of 2017, the national prevalence of under-five overweight is 2.3%, which has increased slightly from 0% in 2009. The national prevalence of under-five stunting is 19.1%, which is less than the developing country average of 25%. the Democratic People's Republic of Korea's under-five wasting prevalence of 2.5% is also less than the developing country average of 8.9%.

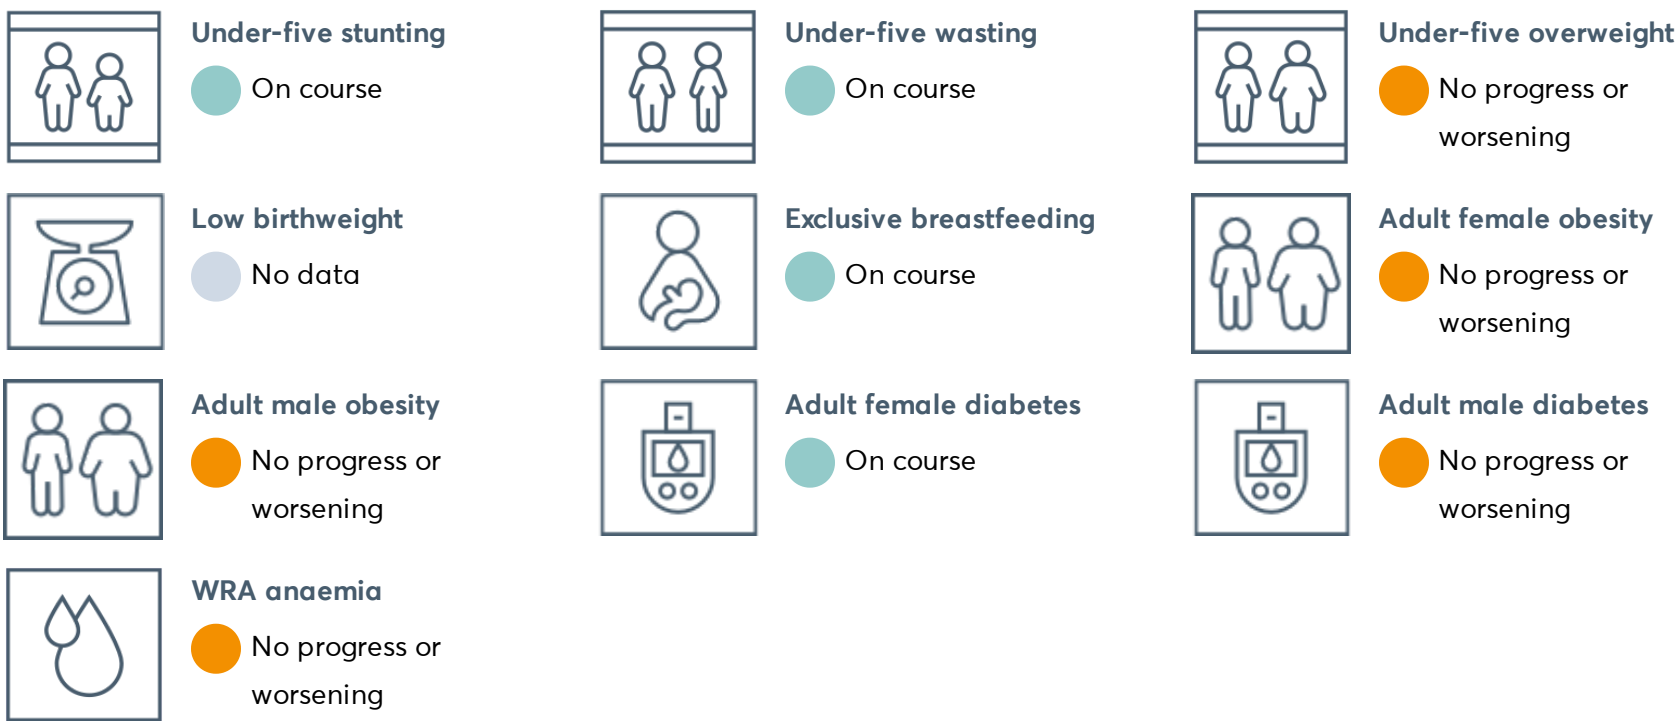

In the Democratic People's Republic of Korea, 71.4% of infants under 6 months are exclusively breastfed, this is well above the Eastern Asia average of 19.9%. There is insufficient data on low birth weight.

The Democratic People's Republic of Korea's adult population also face a malnutrition burden. 32.5% of women of reproductive age have anaemia, and 5.9% of adult women have diabetes, compared to 5.8% of men. Meanwhile, 7.3% of women and 6.1% of men have obesity.

# Resources, policies and targets

## Development assistance

Sources: Development Initiatives based on OECD Development Assistance Committee (DAC) Creditor Reporting System (CRS).

Notes: ODA = official development assistance. Amounts based on gross ODA disbursements, constant 2017 prices. Figure includes ODA grants and loans, but excludes other official flows and private grants.

## National policies

Mandatory legislation for salt iodisation	No
Sugar-sweetened beverage tax	No
Food-based dietary guidelines	No data
Policy to reduce salt consumption	No
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	Yes
Operational, multisectoral national NCD policy, strategy or action plan	Yes
Operational policy, strategy or action plan for diabetes	Yes
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	Don't know
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	Don't know

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: NA = not applicable; NCD = non-communicable disease.

Targets included in national (nutrition or other) plan

Stunting	Anaemia
Yes	Yes
Low birth weight	Child overweight
Yes	No
Exclusive breastfeeding	Wasting
Yes	Yes
Salt intake	Overweight adults and adolescents
Yes	Yes
Multisectoral comprehensive nutrition plan	
Yes
