

Country overview

Malnutrition burden

Poland is on course to meet the global target for under-five stunting, but is off course to meet the targets for anaemia in women of reproductive age, low birth weight, male diabetes, female diabetes, male obesity, and female obesity. There is insufficient target data to assess Poland’s progress for under-five overweight, under-five wasting, and infant exclusive breastfeeding.

While Poland has no prevalence data for under-five overweight and wasting, it has a relatively low malnutrition burden in under-five stunting. The national prevalence of under-five stunting is 2.6%, which is significantly less than the global average of 21.9%.

There is insufficient data on exclusive breastfeeding among infants. Poland’s 2015 low birth weight prevalence of 5.9% has increased slightly from 5.7% in 2000.

Poland’s adult population also face a malnutrition burden. 25.7% of women of reproductive age have anaemia, and 8.4% of adult men have diabetes, compared to 7% of women. Meanwhile, 23.7% of men and 22.2% of women have obesity.

Notes: ODA = official development assistance. Amounts based on gross ODA disbursements, constant 2017 prices. Figure includes ODA grants and loans, but excludes other official flows and private grants.

National policies

| | |
|--|-----|
| Mandatory legislation for salt iodisation | Yes |
| Sugar-sweetened beverage tax | No |
| Food-based dietary guidelines | Yes |
| Policy to reduce salt consumption | No |
| Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs | Yes |
| Operational, multisectoral national NCD policy, strategy or action plan | No |
| Operational policy, strategy or action plan for diabetes | Yes |
| Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt | Yes |
| Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats | No |
