

Sao Tome and Principe

Country overview

Malnutrition burden

Sao Tome and Principe is on course to meet the global targets for under-five overweight, under-five stunting, under-five wasting, and infant exclusive breastfeeding, but is off course to meet the targets for anaemia in women of reproductive age, low birth weight, male diabetes, female diabetes, male obesity, and female obesity.

Although it performs well against other developing countries, Sao Tome and Principe still experiences a malnutrition burden among its under-five population. As of 2014, the national prevalence of under-five overweight is 2.4%, which has decreased from 11.2% in 2008. The national prevalence of under-five stunting is 17.2%, which is less than the developing country average of 25%. Sao Tome and Principe's under-five wasting prevalence of 4% is also less than the developing country average of 8.9%.

In Sao Tome and Principe, 71.7% of infants under 23 months are exclusively breastfed. Sao Tome and Principe's 2015 low birth weight prevalence of 6.6% has remained constant since 2014.

Sao Tome and Principe's adult population also face a malnutrition burden. 46.1% of women of reproductive age have anaemia, and 8.3% of adult men have diabetes, compared to 7.8% of women. Meanwhile, 16.9% of women and 7.2% of men have obesity.

National policies

Mandatory legislation for salt iodisation	Yes
Sugar-sweetened beverage tax	Yes
Food-based dietary guidelines	No data
Policy to reduce salt consumption	No
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	No
Operational, multisectoral national NCD policy, strategy or action plan	No
Operational policy, strategy or action plan for diabetes	Yes
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	No
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	No

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: NA = not applicable; NCD = non-communicable disease.

Targets included in national (nutrition or other) plan

Stunting	Anaemia
Yes	No
Low birth weight	Child overweight
Yes	Yes
Exclusive breastfeeding	Wasting
Yes	Yes
Salt intake	Overweight adults and adolescents
No	Yes
Multisectoral comprehensive nutrition plan	
Yes
