

Overview

Nutritional information

Ethiopia is off course to meet the global targets for all indicators analysed with adequate data. There is insufficient target data to assess Ethiopia’s progress for low birth weight and female obesity.

Ethiopia experiences a malnutrition burden among its under-five population. As of 2016, the national prevalence of under-five overweight is 2.9%, which has increased slightly from 2.6% in 2014. The national prevalence of under-five stunting is 38.4%, which is greater than the developing country average of 25%. Ethiopia’s under-five wasting prevalence of 10% is also greater than the developing country average of 8.9%.

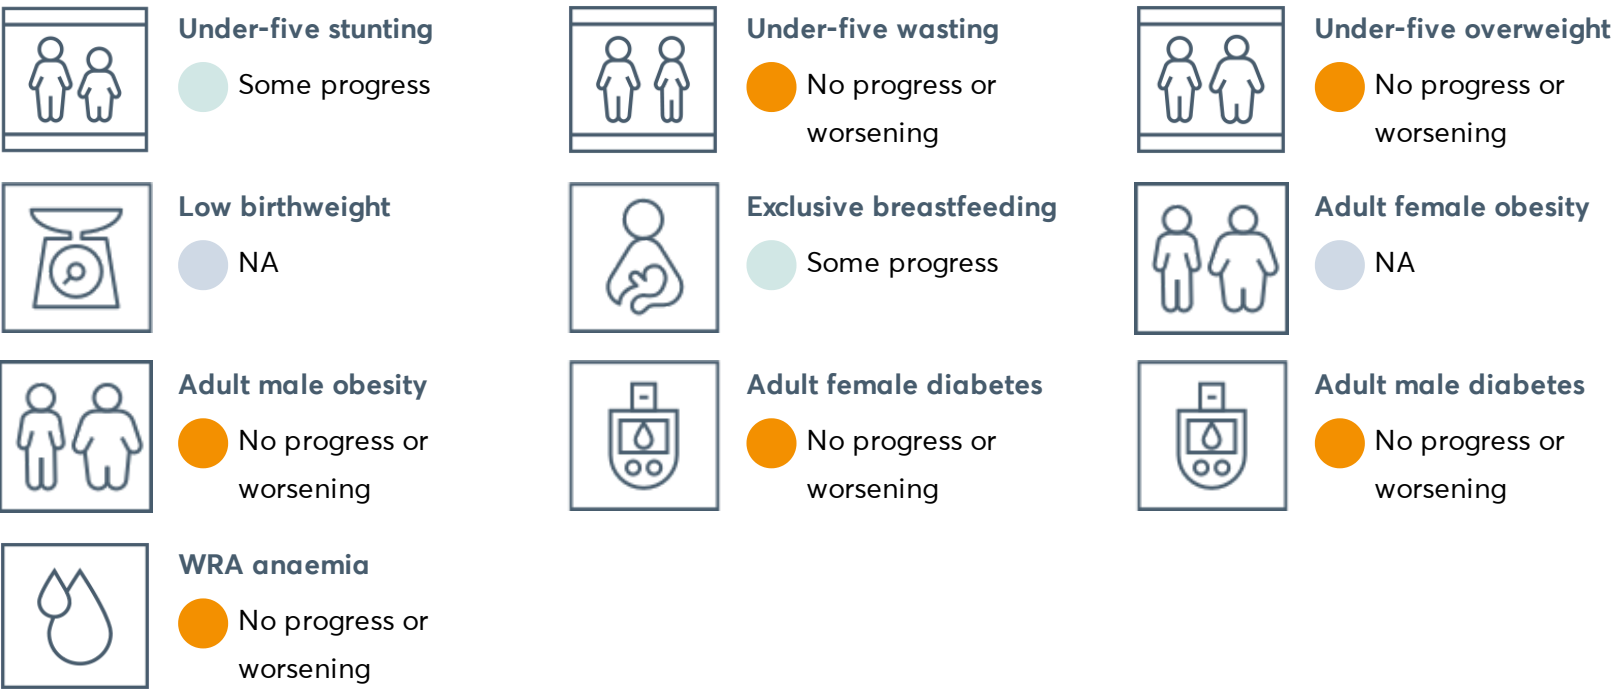

56.5% of infants under 23 months are exclusively breastfed, which is well above the Africa average of 29.4%. There is insufficient data on low birth weight.

Ethiopia’s adult population also face malnutrition burdens. While there is no prevalence data available for anaemia among women of reproductive age, 5.8% of adult men suffer from diabetes, compared to 5% of women. Meanwhile, 6.9% of women and 1.9% of men suffer from obesity.

Sources: UNICEF/WHO/World Bank Group: Joint child malnutrition estimates, NCD Risk Factor Collaboration, WHO Global Health Observatory.

Notes: Thresholds for a country having the form or not: stunting in children aged under-five years >20%; anaemia in women of reproductive age >20%; overweight (body mass index >25) in adult women aged >18 years >35%.

Progress against global nutrition targets 2018

National policies

Mandatory legislation for salt iodisation	Yes
Sugar-sweetened beverage tax	Yes
Food-based dietary guidelines	NA
Policy to reduce salt consumption	No
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	Yes
Operational, multisectoral national NCD policy, strategy or action plan	No
Operational policy, strategy or action plan for diabetes	Yes
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	No
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	No

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: Add note: NA = not applicable; NCD = non-communicable disease.
