Guinea

Country overview

Malnutrition burden

Guinea is on course to meet the global target for infant exclusive breastfeeding, but is off course to meet the targets for all other indicators analysed with adequate data. There is insufficient target data to assess Guinea's progress for low birth weight.

Although it performs relatively well against other developing countries, Guinea still experiences a malnutrition burden among its under-five population. As of 2016, the national prevalence of under-five overweight is 4%, which has increased slightly from 3.8% in 2012. The national prevalence of under-five stunting is 32.4%, which is greater than the developing country average of 25%. Conversely, Guinea's under-five wasting prevalence of 8.1% is less than the developing country average of 8.9%.

In Guinea, 34.2% of infants under 6 months are exclusively breastfed. There is insufficient data on low birth weight.

Guinea's adult population also face a malnutrition burden. 50.6% of women of reproductive age have anaemia, and 6.8% of adult men have diabetes, compared to 6.1% of women. Meanwhile, 11.5% of women and 3.7% of men have obesity.

Resources, policies and targets

Development assistance

- Basic nutrition ODA received
- % of total ODA

Sources: Development Initiatives based on OECD Development Assistance Committee (DAC) Creditor Reporting System (CRS).

Notes: ODA = official development assistance. Amounts based on gross ODA disbursements, constant 2017 prices. Figure includes ODA grants and loans, but excludes other official flows and private grants.

National policies

Mandatory legislation for salt iodisation	Yes
Sugar-sweetened beverage tax	No
Food-based dietary guidelines	No data
Policy to reduce salt consumption	No
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	No
Operational, multisectoral national NCD policy, strategy or action plan	No
Operational policy, strategy or action plan for diabetes	Yes
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	No
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	No

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: NA = not applicable; NCD = non-communicable disease.
