### **Belarus**

### **Country overview**

### Malnutrition burden

Belarus is off course to meet the global targets for anaemia in women of reproductive age, low birth weight, male diabetes, female diabetes, male obesity, and female obesity. There is insufficient target data to assess Belarus' progress for under-five overweight, under-five stunting, under-five wasting, and infant exclusive breastfeeding.

Although it performs relatively well against other developing countries, Belarus still experiences a malnutrition burden among its under-five population. As of 2005, the national prevalence of under-five overweight is 9.7%. The national prevalence of under-five stunting is 4.5%, which is significantly less than the developing country average of 25%. Belarus' under-five wasting prevalence of 2.2% is also less than the developing country average of 8.9%.

In Belarus, 19% of infants under 6 months are exclusively breastfed. Belarus' 2015 low birth weight prevalence of 5.1% has increased slightly from 5% in 2000.

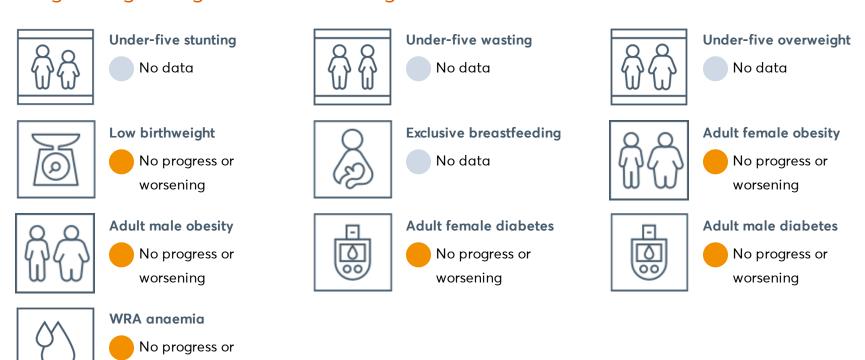

Belarus' adult population also face a malnutrition burden. 22.6% of women of reproductive age have anaemia, and 8% of adult men have diabetes, compared to 7.5% of women. Meanwhile, 26.3% of women and 22.1% of men have obesity.

### Resources, policies and targets

### Development assistance

Sources: Development Initiatives based on OECD Development Assistance Committee (DAC) Creditor Reporting System (CRS).

Notes: ODA = official development assistance. Amounts based on gross ODA disbursements, constant 2017 prices. Figure includes ODA grants and loans, but excludes other official flows and private grants.

### National policies

Mandatory legislation for salt iodisation	Yes
Sugar-sweetened beverage tax	No
Food-based dietary guidelines	No data
Policy to reduce salt consumption	Yes
Operational policy, strategy or action plan to reduce unhealthy diet related to NCDs	Yes
Operational, multisectoral national NCD policy, strategy or action plan	Yes
Operational policy, strategy or action plan for diabetes	Yes
Policy to reduce the impact on children of marketing of foods and beverages high in saturated fats, trans-fatty acids, free sugars or salt	Yes
Policy to limit saturated fatty acids and virtually eliminate industrially produced trans-fats	Yes

Sources: Global Fortification Data Exchange 2018; Sugar-sweetened data prepared using data from the NOURISHING database, academic references and market reports; FAO 2018; WHO Global database on the Implementation of Nutrition Action (GINA), 2nd Global Nutrition Policy Review, WHO Global Health Observatory.

Notes: NA = not applicable; NCD = non-communicable disease.

### Targets included in national (nutrition or other) plan

Stunting	Anaemia
No	No
Low birth weight	Child overweight
No	Yes
Exclusive breastfeeding	Wasting
No	No
Salt intake	Overweight adults and adolescents
Yes	Yes
Multisectoral comprehensive nutrition plan	
No
